

Moorage Tips

1. Please clean up under and around your dock box so that nothing can blow away or become a tripping hazard for other members. Please store all items inside your dock box.
2. Please make sure your dock box lid is locked or fastened shut so it doesn't break off in the wind and find its way to the bottom of the lake.
3. Please ensure your dock lines are in good condition and properly tied. If you need replacements, we have a variety of lengths. Please call the office to request a service order or discuss with the Dock Team.
4. Please do not leave your garbage on the docks.
5. The bike racks are for members using their bikes to commute to the Club and are available for day-use, not to be used as long-term or summer storage for bicycles.
6. Please consider keeping a set of jumper cables on your boat – you will very likely need them...and sooner than you think!
7. If you would like to keep your boat in the basin over the winter months, please submit the Winter Moorage Agreement (can be found on the website) prior to November 1st. Your vessel must be regularly monitored for snow accumulation, power outages and sinking by yourself or a secondary contact.
8. Please remember, outbound vessels always have right-of-way over in-bound vessels, unless the outbound vessels have motorized power and the inbound vessels do not.
9. Dogs must be on a leash under control of the owner at all times while on the docks.
10. As a moorage member please review the Moorage Regulations annually, which can be found on the moorage page of the website.
11. Please remember, there is absolutely no re-fueling of any kind, under any circumstances, allowed in the basin at any time.
12. KYC maintains 30+ mooring buoys on the lake for your enjoyment. Please note that vessels cannot be left unattended on these buoys, and the buoys are open to the public and members alike.
13. Consider the variety of courses available through the local power squadron and KYC to sharpen your navigating, safety, or marine radio operating skills.
14. Please remember, while moored in the basin, sailboats must have halyards secured to provide quiet enjoyment to users of the moorage basin.
15. Please support your Club, if you require any dock accessories such as a dock box, rub rail, dock lines, snubbers, and dock wheels talk to the office or the Dock Team.
16. Please remember - all outboard motors must be kept in the “down” position when the vessel is moored within the KYC basin.

17. Please note that effective August 1, 2009 wooden dock boxes are not permitted on the docks, however those installed prior to this date will be permitted as long as they are painted on a regular basis and maintained in good condition.
18. Please remember, all dock boxes must be mounted on the bull rail with blocks under the front side of the box.
19. Please remember, check the website for regular updates pertaining to the activities at KYC.
20. The moorage move and wait lists are maintained by the office and used for the annual slip allocation process. The lists can be found on the website for members to monitor the progress. If you have any questions, call moorage at 250-762-3310 x 222.
21. Please remember to complete and return a new moorage agreement and insurance policy if you change your vessel.
22. Please consider notifying your insurance provider to automatically forward a copy of your annual vessel insurance directly to our office each year, by fax or email (info@kelownayachtclub.com).
23. A decal must be affixed to your vessel annually, prior to placement of the vessel in the KYC basin. The deadline for placement of the decal is May 1 annually. The decal identifies your vessel as belonging to mooring neighbours, Dock Team Members, Security Team, and delivery of your vessel in the spring.
24. Please remember that the KYC slip and vessels sizes are:
 - a. 50' slip = Over 43' up to and including 53' overall length
 - b. 40' slip = Over 38' up to and including 43' overall length
 - c. 35' slip = Over 33' up to and including 38' overall length
 - d. 30' slip = Over 28' up to and including 33' overall length
 - e. 25' slip = Over 23' up to and including 28' overall length
 - f. 20' slip = Min. 16' up to and including 23' overall length
25. Please remember, when measuring LOA (length over all) that this is a tip-to-tip measurement of your vessels including any OEM add-ons such as a swim grid, bow rail, bow sprit, or pulpit.
26. If you have a dinghy in your slip please consider keeping it covered or storing it upside down on your boat in order to prevent water from accumulating in it.
27. There's no easy way to say this one, but please remember that the lake, particularly inside the Club basin, is not your bathroom.
28. Please ensure that if you have a powered slip, whenever you unplug your boat to pull out of the basin, please ensure that you also pull your electrical cord out of the pedestal outlet. Otherwise, the female end of your cord will be left live, on the docks, posing a hazard. The proper way to unplug is to start at the pedestal outlet and then unplug at your boat.
